## **A new pharma Toploading cartoner from Dividella: the NeoTOP 1604 closes the circle of performance and flexibility**

***Dividella is launching a new NeoTOP solution for even better performance and even greater flexibility in the secondary packaging of parenteral substances.***

Grabs, Switzerland, 26 September 2016 - Dividella, the manufacturer of pharma and biotech packaging solutions and systems for secondary packaging of parenteral substances, is bringing a new Toploading machine to market. Within the NeoTOP range, the NeoTOP 1604 meets the market's demand for a product-flexible packaging machine which, in addition to single packs, is also able to handle packs with five, ten or 100 products at a high level of output.

The machine's modular, expandable construction and the wide range of available NeoTOP infeed systems for products and booklets also make it possible to process a large number of packaging variants on one system.

The NeoTOP 1604 is ideally suited for packaging medium-sized and large lots up to 16 million packs per year. With a format range between 60 x 35 x 17 mm and 200 x 170 x 60 mm (optionally: 450 x 170 x 60 mm), blisters, ampules, vials, syringes, injectors and similar products can be packaged in a wide range of standard and special packs. Despite its exceptional flexibility and high output, the NeoTOP 1604 features a surprisingly small footprint.

Like the other members of the NeoTOP family, this machine also uses the patented Topload process, where the products are inserted into the secondary packaging from above with

extreme care. The use of flat monomaterials and the compact external dimensions of the secondary packs ensure a sustainable packaging concept and reduce pharmaceutical manufacturers' logistics costs.

In order to meet regulatory requirements, the NeoTOP 1604 also offers integrated solutions for tamper evidence, child safety and Track&Trace functions.

With the NeoTOP 1604, Dividella offers its customer a solution which copes with the ever growing range of secondary packaging for pharma and biotech products as well as keeping in mind the overall efficiency of the packaging process.
