

Priorclave Features Top Loading Autoclaves at Arab Health

Priorclave, a leading UK laboratory autoclave specialist is exhibiting a number of steam sterilisers at the Arab Health exhibition later this month, showing all that is good about British engineering, design and manufacture - robust quality construction, superb operating performance and the utmost in product reliability.

On stand RK38 at Arab Health this progressive autoclave development company has chosen to feature just its top loading laboratory autoclaves from a standard range of more than 66 models –

- The very popular C60 compact 60 litre autoclave specifically developed for those organisations with limited space yet want to sterilise tall items such as fermenters and Erlenmeyer flasks
- Featured alongside will be the slightly larger capacity top loading autoclave, the QCS EV 100 laboratory autoclave
- A 150 litre vacuum laboratory autoclave is also being shown.

Visitors to the stand will see first-hand the superior build quality of the Priorclave autoclaves all with an exterior anti-microbial coating which is highly effective for control of harmful bacteria, preventing the potential for cross contamination with laboratories.

There is also the opportunity to collect the companies latest Laboratory Autoclave Guide. It is an easy to follow guide featuring all standard current laboratory autoclaves produced by Priorclave including small benchtop autoclaves, the three designs on show plus a wide choice of larger front loading autoclaves as well as double-door and power-door steam sterilisers.

Priorclave is proud of its first class reputation for delivering the right product for customer requirements, if this means producing the autoclave as a modular package for easier installation this can be done. It has even produced an autoclave to operate reliably in locations subject to earthquakes.

This global product brand is support by one of the best warranty and support programs available, delivered by Priorclave's dedicated support team based in the UK. The customer care team responds quickly to any concerns over correct programming, will analyse performance data as well as help customers maintain their autoclave in the very best condition, ensuring long, trouble free performance for many years ahead.

Note: Arab Health takes place 26th - 29th January 2015, Sheikh Rashid Hall at the Dubai International Convention & Exhibition Centre, UAE.
