

## Cylindrical AutoclavesImprove Lab Performance

The QCS front loading autoclave range introduced by <u>Priorclave</u> should help any laboratory increase its sterilising throughput owing to the combination of improved load capacity and exceptional operating performance. There may also be an added benefit of lower overall running costs associated with reduced power and water usage.

These factors alone mean that QCS front-loading laboratory autoclaves with theirlarge capacity 500mm diameter sterilising chamberswill appeal to both in-house and contractlaboratories serving industrial and research sectors such as food and pharmaceutical. The big draw is that investing in a Priorclave QCS steam steriliser provides greater versatilitywhere the scale of items to be sterilised may vary significantly. Both small and taller items can be processed in a single machine run, making it highly likely they will be able tocater for a laboratories entire daily throughput.

As part of its comprehensive standard range of laboratory autoclaves Priorclave has introduced three standard capacityQCS front-loading steam sterilisers - 100, 150 and 200 litres- delivering temperatures up to 140°C at 2.4 bar all easily controlled through the Tactrol® 2 microprocessor system. It allows for adjustment of temperature and time for simple cycles to fully featured multi-programme operation with printed records. This powerful controller allows unrivalled flexibility, monitoring and management of the process cycle.

For the busy working environment the QCS autoclave range from Priorclave is ideal, by automating the sterilising process and with features to assist in autoclave management it enables laboratory staff to continue with other tasks secure in the knowledge that sterilisation is proceeding safely and efficiently.
