

Priorclave Introduce Autoclave Application Selector at Arab Lab

It is not unexpected to find that senior managers from British autoclave manufacturer Priorclave will be making their way East next month to attend this year's Arab Lab 2012 exhibition (26 – 29th March 2012 at the Dubai Conference and Exhibition Centre), which provides a strong showcase opportunity to buyers from the Middle East, Africa and the Indian sub-continent. Throughout the four-day exhibition they will be providing valuable technical and sales support to their local United Arab Emirates distributor on stand 1026 for those interested in the Priorclave autoclave brand.

Product quality coupled with a bespoke build programme and an excellent affordable pricing structure has meant that for many years Priorclave has enjoyed healthy exports with growth year-on-year and during the past 12 months the company has shipped more models from its Compact range with circular chambers to larger floor-standing rectangular chamber models, covering 40 to 850 litre capacities.

This success brought uncertainty as to which models to promote at Arab Lab therefore the company has decided to introduce show visitors to its simple on-line 'Select a Priorclave Steam Autoclave'.

This simple Steriliser Application Selector which is accessed via the company's website www.priorclave.co.uk will help buyers and specifiers draw-up a steriliser specification that relates to exactly what they want from a steam autoclave – benchtop, floor-standing, front or top loading, double-ended as well as power doors and chamber capacity. The Selector also has the added benefit of being able to search in price bands.

Leading the Priorclave delegation at Arab Lab is Paul Richardson who will be on-hand to discuss the finer points of autoclave design including bespoke build that caters for those more unusual and often more demanding applications.

If looking for an autoclave a visit to stand 1026 could be the most important time spent for sourcing British engineering quality at its very best, autoclaves that often produce the lowest cost of ownership from that all important initial price to actual running costs.
